### # How to use

This software provides video communications using shared links. Read more ..

- Create a link, share it
- Connect to the link as a host
- Others should connect as guests

https://ivohost.com 2/5

#### **Requirements:**

Web browser Chrome or Chromium.

### # How it works

This software is a **web application**, it is installed on a web server and allows the users to connect to it with a web browser.

The software **creates a link**, this link is then shared between the users and allows them to connect in a **meeting or conference**.

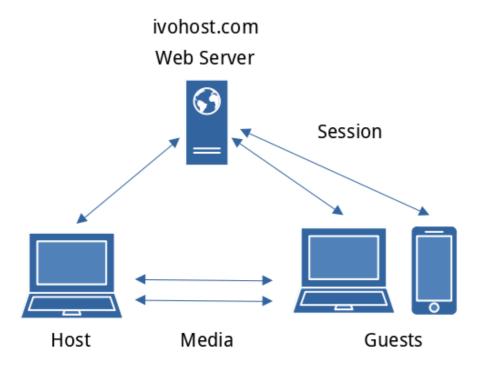

The software uses **WebRTC Technology** for direct communication between the users.

- WebRTC Technology
- WebRTC Security

The video audio and chat is **encrypted and directly exchanged between the users,** and is not passing through the Web Server.

The software is designed with **WebRTC Selective Forwarding Unit architecture on the client side**, The host user acts as a SFU and is forwarding media between the guest users
